INTEGRATE YOUR HR SYSTEM

Personalized Experience

Turn that wall of names into a meaningful list of people you care about! Your HR connection will tell Officely who your teammates, direct reports, manager and new starters are, allowing us to tailor an experience much more relevant to you.

Intelligent Office Day Suggestions

Officely will intelligently recommend the best days to go into the office based on who else is there. Your HR connection allows us to understand relevant relationships between employees. We've found this can really increase intentional office use.

Automatic Vacation Sync

Automatically sync your leave data so that it's super easy to see who's where in Officely without having to add information to two separate systems.

@Max, @Rich and @Phil are in the office on Friday. Do you want to join them?

WHAT DO WE NEED ACCESS TO?

Organization Data

Officely needs 'read access' to your Teams and Departments. We'll automatically sync these with Officely so that you can access insights and analytics for each team. You will also benefit from a far more personalized experience in Officely along with intelligent notifications.

Employee Data

Officely needs access to basic employee profile information such as first name, last name and email along with each employee's managers and direct reports. We use this information to further strengthen our understanding of who is relevant to you, allowing us to send you helpful notifications and tailor your experience in Officely.

Employment Start & End

Employment data sounds scary, but we only require 'read access' to an employee's start and end dates. This allows us to determine if someone is a new starter, which is important as new starters benefit a great deal from more time in the office and require additional notifications about where their team are working to help them build those important relationships. We use the employment end date to automatically remove the employee from Officely. We will never show someone's end date within Officely, as this could be sensitive.

Leave Data

Finally we need 'read access' to your leave data. This allows us to show you who is on vacation and off sick right in Slack. Note, currently only vacation and sick leave are synced to Officely.
